released from recombinant host cells. The enzyme can be used in the production of fucosylated oligosaccharides such as Lewis X, Lewis Y and slalyl Lewis X, which are structurally similar to certain tumour associated antigens found in mammals. These glycoconjugates also have research and diagnosis utility in the development of assays to detect mammalian tumours. The enzyme can also be used to raise specific antibodies. Inhibition of abnormal fucT gene product activity can be used to the treatment of intestinal mucosal disease. (Updated on 17-oct-2003 to standardise OS field)
                                                                                                                                                                                                                              ų,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                                                 2
                                                                                                                                                                         This invention relates to novel isolated polynucleotides and the encoded polypeptides thereof, which are related to the fucosyltransferase enzymes (Futh and FutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to Nacctylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expression systems. This polypeptide sequence is an H. pylori strain 1111 FutA protein sequence of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              358
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated glycoptotein. The method involves contacting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucosy residue from a donor substrate the acceptor substrate on the producing fucosylated glycoprotein. The method is useful for producing fucosylated glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        28

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240

                                                                                                                                                                                                                                                                                                                                  Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 8, Application US/10189977A

Sequence 8, Application US/10189977A

Patent No. 6962806

GENERAL INFORMATION:
PAPPLICANT: Taylor, Diane E.

APPLICANT: Taylor, Diane E.

APPLICANT: Taylor, Diane E.

APPLICANT: Ge, Zhongming

TITLE OF INVENTION: NUCLEIC ACIDS ENCODING ALPHA-1,3

TITLE OF INVENTION: FUCOSYLFRANSFERASE AND EXPRESSION SYSTEMS FOR MAKING AND

TITLE OF INVENTION: EXPRESSING THEM (amended)

FILE REFERENCE: 07254-049002

CURRENT APPLICATION NUMBER: US/10/189,977A

CURRENT FILING DATE: 2002-03-07

PRIOR APPLICATION NUMBER: US/09/733,524

PRIOR APPLICATION NUMBER: US 60/048,857

PRIOR APPLICATION NUMBER: US 60/048,857

PRIOR PILING DATE: 1997-06-06

NUMBER OF SEQ ID NOS: 27

SOFTWARRE: FastESEQ for Windows Version 4.0

SEQ ID NO 8

LENGTH: 454
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RMPLYYDRLHHKAESVNDTTAPYKIKPDSLYTLKKPSHHFKEKHPHLCAVVNDESDPLKR 177

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1, Application US/09733524A

Sequence 1, Application US/09733524A

Patent No. 6534298

GENERAL INPORMATION:

APPLICANT: Taylor, Diane E.

APPLICANT: Taylor, Diane E.

TITLE OF INVENTION: NUCLEIC ACIDS ENCODING ALPHA-1,3

TITLE OF INVENTION: EXPRESSING THEM (amended)

TITLE OF INVENTION: EXPRESSING THEM (amended)

TITLE OF INVENTION: EXPRESSING THEM (amended)

FILE REFERENCE: 07254-049002

CURRENT APPLICATION NUMBER: US/09/733,524A

CURRENT FILING DATE: 1998-06-05

PRIOR FILING DATE: 1998-06-05

PRIOR FILING DATE: 1997-06-06

NUMBER OF SEQ ID NOS: 27

SOFFWARE: FastSEQ for Windows Version 4.0
